

**SELECT**

SELECT

FEATURE-RICH GPS SOLUTION

PassTime Select is a feature-rich solution for customized asset management. Stay connected with on-demand web, text, and email-based alerts. Features like payment reminders, precise geofencing, remote install verification and starter interrupt gives users ultimate control over their vehicles and customer communications.

INSTALL VERIFICATION

SELECT has installation verification that makes it easy to verify your device is installed properly before it leaves the dealership.

FEATURE-RICH GPS

SELECT combines GPS with feature-rich collection technology. Send payment reminders, track mileage, set geofences, and much more!

TOW & TAMPER ALERTS

SELECT offers instant email or SMS notifications if your asset is being towed or if a customer is tampering with the device.

NETWORK LONGEVITY

SELECT utilizes advanced 4G LTE cellular technology that is 5G network compatible. This means years of longevity!

MY 20 YEARS
OF GPS PURCHASING, THERE IS
NO BETTER COMPANY
THAN PASSTIME”**

FAQs - PASSTIME GPS

Q: What are the benefits of a PassTime GPS device to the Credit Union?

A: PassTime devices help reduce the credit union's risk of financing. Fewer defaults require fewer reposessions, which improves cash flow and allows the credit union the ability to fund more loans.

Q: What are the benefits of a PassTime GPS device to the Member?

A: With a member agreeing to the use of the device, the Credit Union may feel comfortable providing the member financing for a higher loan amount, a lower interest rate or a lower down payment all which could benefit the member. Additionally, if the member's vehicle is stolen, the GPS may be helpful to law enforcement for recovery.

Q: Who installs the GPS Device?

A: Installation can typically be performed by a mechanic or an electronics installer. PassTime also has installation programs in certain areas.

Q: Can the cost of the GPS Device be passed onto the Member?

A: The GPS device should be considered an operating cost and should not be passed on. In fact, doing so could be unlawful in some states.

Q: Does the Member need to know there is a GPS installed on their vehicle?

A: Yes, the device and how it works must be disclosed to the member. PassTime has state-specific, written disclosure forms available for all customers to use.

Q: Can the GPS Device Shut Down a Vehicle?

A: Some GPS devices include a feature called "starter-interrupt" or "vehicle disable" which can disable or interrupt the starter of the vehicle. A properly installed device cannot disable a vehicle while it is running. Ask about the available features on your device.

Q: Which wireless network does the GPS Device use?

A: PassTime works with top-tier wireless carriers to provide service to its GPS solutions. In the United States, most PassTime devices operate on Verizon or AT&T.
