StrongBox™

LEVERAGE
Your Advantage

Organization Collaboration StrongBox

A secure platform designed by bankers for the financial services sector to work easily and securely with digital consumers.

The “New Normal” has forever changed how consumers and businesses want to get documents to and from their trusted service provider. Our technology eliminates the pain points in existing document exchange workflow and secure email products when exchanging files and data between organizations and their customers, businesses and external third parties. This is a dynamic platform that expands users, adds groups and adjusts to your workflow as needed.

Data Security & Patents protect your data.

Our secure, customizable platform, with its eight patents and Total Information Privacy and Protection (TIPP), is designed with Financial Service security requirements in mind. We then couple that data security with convenience and simple, intuitive UX consumers demand.

Features and Benefits Include

Passwordless Upload Folders

Eliminate end-users from needing usernames and passwords or sending email attachments to you

Full Text Indexing

Automatically builds tags and search words and phrases so you don't have to

Multi-file Download Capabilities

Make it easy to move all files and folders at once to your internal processes

Group Notifications

Incoming emails and text to assigned groups so nothing gets missed

Document Retention

Access doesn't expire like it does in secure email tools
